

## Gull Wing Conveyor

*If you prefer to keep separate fillers set up for a specific size clamshell, our Gull Wing Conveyor allows you to do so - when you want to run a different size, simply reverse the belt to feed a different filler*

### How It Works

The Gull Wing Conveyor is fed by an inspection belt set low enough for grading personnel to stand on the floor, and is set up to feed two separate fillers. If you have each filler setup for a different size clamshell, and want an extremely fast changeover from 1 size clamshell to another, you simply flip a switch to change the direction of the belt, and your 2nd filler is instantly being fed.

### Available Options

- Telescopic adjustable legs
- Variable speed control

### Features

- Bi-directional belt
- Accepts almost any size grade belt
- All stainless construction
- Cleated plastic Intralox belt
- Conveyor built to reach the hopper height on fillers in a small amount of space
