

Soft Berry Tilt Belt

MODEL # 16000

Use this in any blueberry line to remove soft berries and other debris like sticks or leaves that do not easily roll across a slanted surface.

How It Works

Berries are fed onto the upper side of the belt bed. The belt bed is traveling horizontally and is set at an angle such that firm berries will roll down the slant surface onto the next piece of equipment in the packing line. The soft berries, sticks, or leaves that do not roll as easily will stay on the belt and be conveyed off the end, thus separating unwanted berries from the main flow.

Available Options

- Casters
- Customizable discharge height from 32" - 72"

Features

- Crank adjustment for the angle of the slant bed
- Variable speed control for the belt
- Dependable, easy clean design
- 42" x 84" bed size
- Adjustable leg height
- Plastic link sprocket drive type belt
