

Box Weigh Filler

MODEL # SP100E

How It Works

Product is conveyed into the initial filling hopper. Once set points are set and a box is in place, with a push of a button product is fed into the box below. As the weight approaches the final fill weight, the metering feed slows down for accurate filling every time. Once the final fill weight has been achieved, the filler automatically stops to allow for the removal of the full box.

Top Seller!

- Fills boxes or other containers by weight
- Compact design occupies less space
- Manual bag filling attachment
- Other attachments available
- 110 volt power required
- High speed "bulk fill" / Low speed "final fill" assures maximum accuracy
- Simple to operate and program weight settings from 0 - 85 lbs
- Easy to clean / No trap points for debris
- Adjustable scale platen height to fill wide range of box sizes
- Telescopic legs adjust hopper height from minimum 37" to 66"
