DESTEMMERS

THE MOST EFFICIENT WAY TO REMOVE STEMS FROM FROZEN BERRIES

LAKWOOD Drum Destemmer

- All stainless steel design
- Cage doors for convenient cleaning and inspection of machine
- Heavy duty adjustable height legs

The Drum Destemmer is ideal for destemming frozen berries after an IQF tunnel.

Frozen berries enter the drum destemmer from an elevating conveyor or transfer conveyor and drop into the destemmer's cylindrical drum. The drum, which is formed from stainless mesh, spins and catches stems on the frozen berries as they pass through the destemmer. The majority of the berries stems are dropped through the mesh, leaving the product exiting the destemmer free of stems and smaller debris.

Drum Destemmer Capacities

Drum Diameter	Capacity (lbs per hour)
4' Dia (12' Long)	15,000 lbs /hour
