

DEWATERING SHAKER TABLE

LAKEWOOD
PROCESS MACHINERY

WATER REMOVAL

REMOVE EXCESS WATER AND CREATE AN EVEN PRODUCT FLOW

LAKEWOOD Dewatering Shaker Table

- Low maintenance
- Quiet operation
- Easy to clean

Remove water and spread berries or other product efficiently and evenly to create an even flow feeding onto the next machine in a processing line. The mesh deck is driven by an unbalanced "Shaker Drive" gear box. Product moves along the deck by an oscillating motion. Water drains away from product and discharges out through the mesh deck.

Dewatering Shaker Table Capacities

Model	Capacity (lbs per hour)
32"W x 44"L	Variable
36"W x 44"L	Variable
58"W x 44"L	Variable

LAKEWOOD 90 Degree Shaker Table

- Low maintenance
- Quiet operation
- Easy to clean

Remove excess water while distributing product evenly into a conveyor or other piece of machinery at a 90 degree angle.

Product is fed onto the 90 degree shaker from a conveyor or another piece of machinery. The movement of the shaker removes water and encourages all product to spread out evenly across the shaker's deck, allowing it to be spread evenly and consistently onto whatever conveyor or piece of equipment the shaker is feeding. The 45 degree angle of the deck's exit end allows you to feed your next piece of equipment in line at a perpendicular angle without product piling up in one spot

90 Degree Shaker Table Capacities

Model	Capacity (lbs per hour)
20" W x 77" L	Variable
36" W x 88" L	Variable
